

Using D-Molish Now! on Carpet Stains

Sometimes MISTING just isn't enough!

Neutron customers love D-Molish Now! But every now and then, we talk to some customers who don't experience the incredible results we expect them to, especially when they're using the product for urine stains and odors in carpet. We've found that when D-Molish Now! doesn't measure up, it's usually for two reasons:

1. Customers aren't using enough D-Molish Now!.
2. Customers aren't keeping the carpet wet enough.

The directions on the D-Molish Now! label instruct users to:

Spray a fine mist directly on the carpet, then mist with water.

This won't work! You need to pour the D-Molish Now! on the spot. This gets the carpet wet enough to dissolve the uric acid crystals. The bacteria can't "eat" the urine unless the crystals are dissolved. *Always remember to test for color fastness first!*

Then, be sure to use enough product to get the carpet backing wet. In fact, for really bad stains, you may need to pull up the carpet and treat the bare floor and the carpet backing with plenty of D-Molish Now!.

Next, soak a towel with warm water, wring it out, and put it over the spot overnight. The bacteria need to stay wet to keep working. Step on the wet towel to make sure it is making good contact with the carpet. This will also improve the "wicking" of the urine into the towel. MISTING just isn't enough – especially in drier climates.

Use D-Molish Now! in this way – And you'll love it too!
